Orion Haunstrup
Kesava
Ben Weakley

(Task 0) — Set up a group GitHub for this assignment << Kesava

- We're building a thing *twice* once using two different methods
  - Once using Dynamic Arrays (is that just Python lists?)
  - Once using Linked Lists

- We're building a Class object MaintenanceRequest
  - User types in
    - Building code (Task 1) << Kesava
    - Type of request
    - Priority Level
  - The class (on its own)
    - Records the time
    - And generates a request ID number
    - And a status (open or closed)

  <<< This is saved as a separate Python file

  *** Write down some notes about
  - how it went (?) while you were designing
  - He asks for
  - key decisions and alternatives considered

  <<< We'll be submitting this at the end

- We're using fixed-length Python lists (??) to make our own Dynamic Array class. (Task 2) << Orion
-
  - *** Write down some notes about
    - how it went (?) while you were designing
    - He asks for
    - key decisions and alternatives considered

    <<< We'll be submitting this at the end

- Basically the same thing but with a linked list

(Task 3) <<< Ben

*** Write down some notes about
how it went (?) while you were designing
He asks for
key decisions and alternatives considered

<<< We'll be submitting this at the end

Part 6 describes what methods the two classes need to be able to do. Aka what commands you can give them.

Make the dynamic array searchable & sortable (Task 4)

<<< Orion

Make the linked list searchable & sortable (Task 5)

<<< Ben

_____ try to have that done by _____

>>> Orion will get done the Dynamic Array part before
the end of Friday

Part 9 asks us to TEST the whole thing out, giving detailed demonstrations

(Task 6) <<< Kesava

Part 10 … give our code a performance test

See how fast it runs, etc

Part 11 … Analyze the Big-O runtime of all the things
(Task 7) <<< Ben

Part 14 we're group 4, so we're simulating user D
>> test it out again (Task 10) <<< Orion

Part 12 … Make a recommendation between the two
linked list
dynamic array
(Task 8) <<< Orion

Part 13 …. Submit a draft of our design notes that we took while building / designing (Task 9) <<< We all kinda submit our own part
(a chunk of a page)

Final double-check that we're handing in all the stuff
(Task 11) <<< everybody

Questions:

What in the world is algorithms.py?
>> Parts D and E (ask AI)
What in the world is test_project.py
>> Parts D, F, and 6
